

We are building the next generation of
Big Data and Analytics solutions!

Background

26 years Experience IT Industry

- 12 Years Solutions Architect - International
- 10 Years - IT Director - Private Banking OSLO
- 4 Years - CEO - Cloud Explorers - Big Data International

Stephen Karl Ranson
CEO

Profile

Passionate about Technology

Genuine Interest In All Things Digital

Resourceful

Innovative

Out of the Box Thinker

Disruption

I ❤️ DATA SCIENCE

Introduction

“DATA”

1944 - Books - 20m - 40 buildings 2040
The acknowledgement of **big data** was identified by Fremont Rider, Wesleyan Univeristy Librarian, who estimated that libraries in America universities would **expand to over 20,000,000** volumes by 2040 Today, Yale Library alone has approximately 12.5 million volumes across 20 buildings on campus.

1961 - Knowledge - 15yr x2
Derek Price's research on scientific knowledge concluded that scientific journals had **doubled every 15 years**. This is now better known as "**law of exponential increase**".

1975 - Words - Unit of Measure
The Ministry of Posts and Telecommunications in Japan began conducting the **Information Flow Census**, tracking the volume of information circulating in Japan. The census introduces "**amount of words**" as the unifying unit of measure across all media.

1983
Author Ithiel de Sola Pool looked at the growth trends in 17 major communications media from 1969 to 1977, and concluded that the **flow of information had exponentially grown by 2.9%** throughout that period due to broadcasting and media.

2001 - 3 V's of Data
Doug Lanely published a research note titled "3D Data Management: Controlling Data **Volume, Velocity, and Variety**." A decade later, these "**3 V's**" became the defining dimensions of big data.

1997 - Big Data - Phrase Coined
The term "big data" was used for the first time when researchers M.Cox and D. Ellsworth wrote an article identifying that the **rise of data** was becoming an issue for current computer systems. In other, words, the problem of "**big data**".

2008 - Exaflood - US IP Traffic 2015
Economists Bret Swanson and writer George Gilder published "**Estimating the Exaflood**" which stated U.S. IP traffic could reach one zettabyte by 2015, and that the U.S. Internet of 2015 would be at least **50 times** larger than it was in 2006.

2006
Amazon Launched AWS, To Become Worlds Largest IT Cloud Actor.
Hadoop Created at Yahoo!

2011 - 25% Growth pyr - 94% digital
Martin Hilbert and Priscila Lopez, estimated that the **world's information storage capacity grew** at a compound annual growth rate of **25% per year** between 1986 and 2007. They also estimated that in **1986, 99.2%** of all storage capacity was **analog**, but by **2007, 94%** of all storage capacity was **digital**.

2009 - 12 hours - 34 GB
Researchers Roger E. Bohn and James E. Short found that modern Americans **consumed information** for an average of almost **12 hours** per day. Consumption totalled 3.6 zettabytes and 10,845 trillion words, corresponding to 100,500 words and **34 gigabytes** for an average person on an average day.

2016
Petabyte pr. day!

1876 - Recording Data - Systematic

1949 - Reaserch Storage Capacity - Analog
Claude Shannon, known as the "**Father of Information**", carried out research on big storage capacity on items such as punch cards and photographic data. One of the largest items on Shannon's list was the Library of Congress, measuring over 100 trillion bits of data.

1971 - Bits - Measure of Privacy
Arthur R.Miller, author of the book '**Assault on Privacy**,' identified that "too many information handlers seem to **measure a man by the number of bits** of storage capacity his dossier will occur."

1981 - Enterprise Data - Growth in bits
The Hungarian Central **Statistics Office** carried out a research project that is still on-going today. This involved accounting for the country's information for industries via measuring data volumes in bits.

1995 - Org Nr - Norway
Org. Nr. Introduced Registered as AS
Statistisk sentralbyrå
Statistics Norway

1996 - Cost Effective - Digital
Digital storage became more **cost-effective** for storing data than paper.

1998
Founded
Google

2000 - 1.5 exabytes - New Data
Peter Lyman and Hal R. Varian published the first study that quantified, in **computer storage** terms, the total amount of new and original information created in the world annually. The study concluded in 1999, a year in which the world had produced approximately **1.5 exabytes** of unique information.

Smartphone
Revolution

2005 - The New Web - Infoware
"What is **Web 2.0**" was published by writer Tim O'Reilly, in which he started that "data is the next intel inside and SQL is the new HTML. Database management is a core competency of Web 2.0 companies, so much so that they have sometimes referred to these applications as "infoware" rather than merely software.

2013/Ongoing - Big Data Age Begin
Businesses are beginning to implement **Big Data** to **analyze** and optimize mass quantities of data. Deriving **unprecedented** value and **advantage**.

BIG DATA

MARKETING WANTS TO SOLVE THE MYSTERY

MODERN DATA SHERLOCK

MATH & STATISTICS

- ★ Machine learning
- ★ Statistical modelling
- ★ Experiment design
- ★ Bayesian inference
- ★ Supervised learning: decision trees, random forests, logistic regression
- ★ Unsupervised learning: clustering, dimensionality reduction
- ★ Optimization: gradient descent and variants

DOMAIN KNOWLEDGE & SOFT SKILLS

- ★ Passionate about the business
- ★ Curious about data
- ★ Influence without authority
- ★ Hacker mindset
- ★ Problem solver
- ★ Strategic, proactive, creative, innovative and collaborative

PROGRAMMING & DATABASE

- ★ Computer science fundamentals
- ★ Scripting language e.g. Python
- ★ Statistical computing package e.g. R
- ★ Database SQL and NoSQL
- ★ Relational algebra
- ★ Parallel databases and parallel query processing
- ★ MapReduce concepts
- ★ Hadoop and Hive/Pig
- ★ Custom reducers
- ★ Experience with xaaS like AWS

COMMUNICATION & VISUALIZATION

- ★ Able to engage with senior management
- ★ Story telling skills
- ★ Translate data-driven insights into decisions and actions
- ★ Visual art design
- ★ R packages like ggplot or lattice
- ★ Knowledge of any visualization tools e.g. Flare, D3.js, Tableau

rule-based decision making

if condition fulfilled *then*
activity 1
else
activity 2

boolean data
(yes or no)

Examples:

- phone notification
- time- or threshold-based alarms
- simple pattern
- matching

statistical reasoning

simple regression

numerical data

allowing for
curve fitting

Examples:

- extra- and interpolation
- outlier detection
- predictive maintenance

machine learning

classification tasks

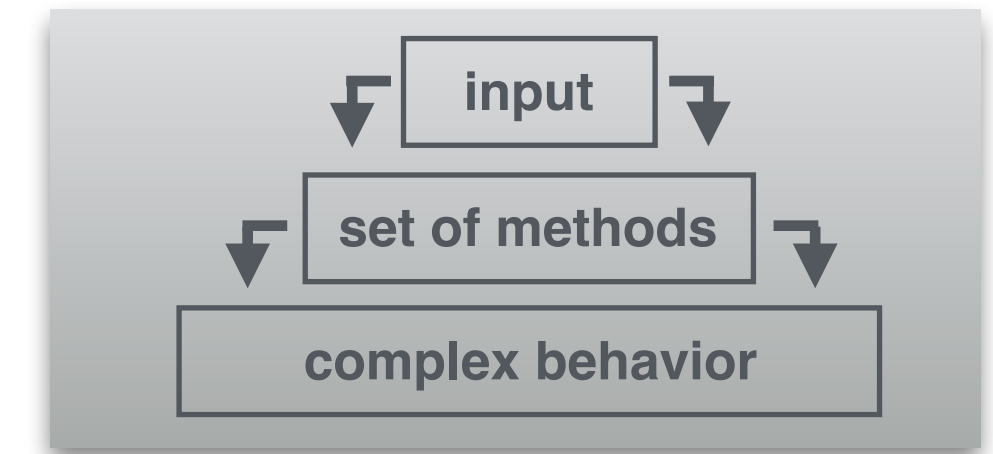

arbitrary data

that needs to be
abstracted into
numbers

Examples:

- identification of relevant features from large input datasets
- quality control using various metrics

artificial intelligence

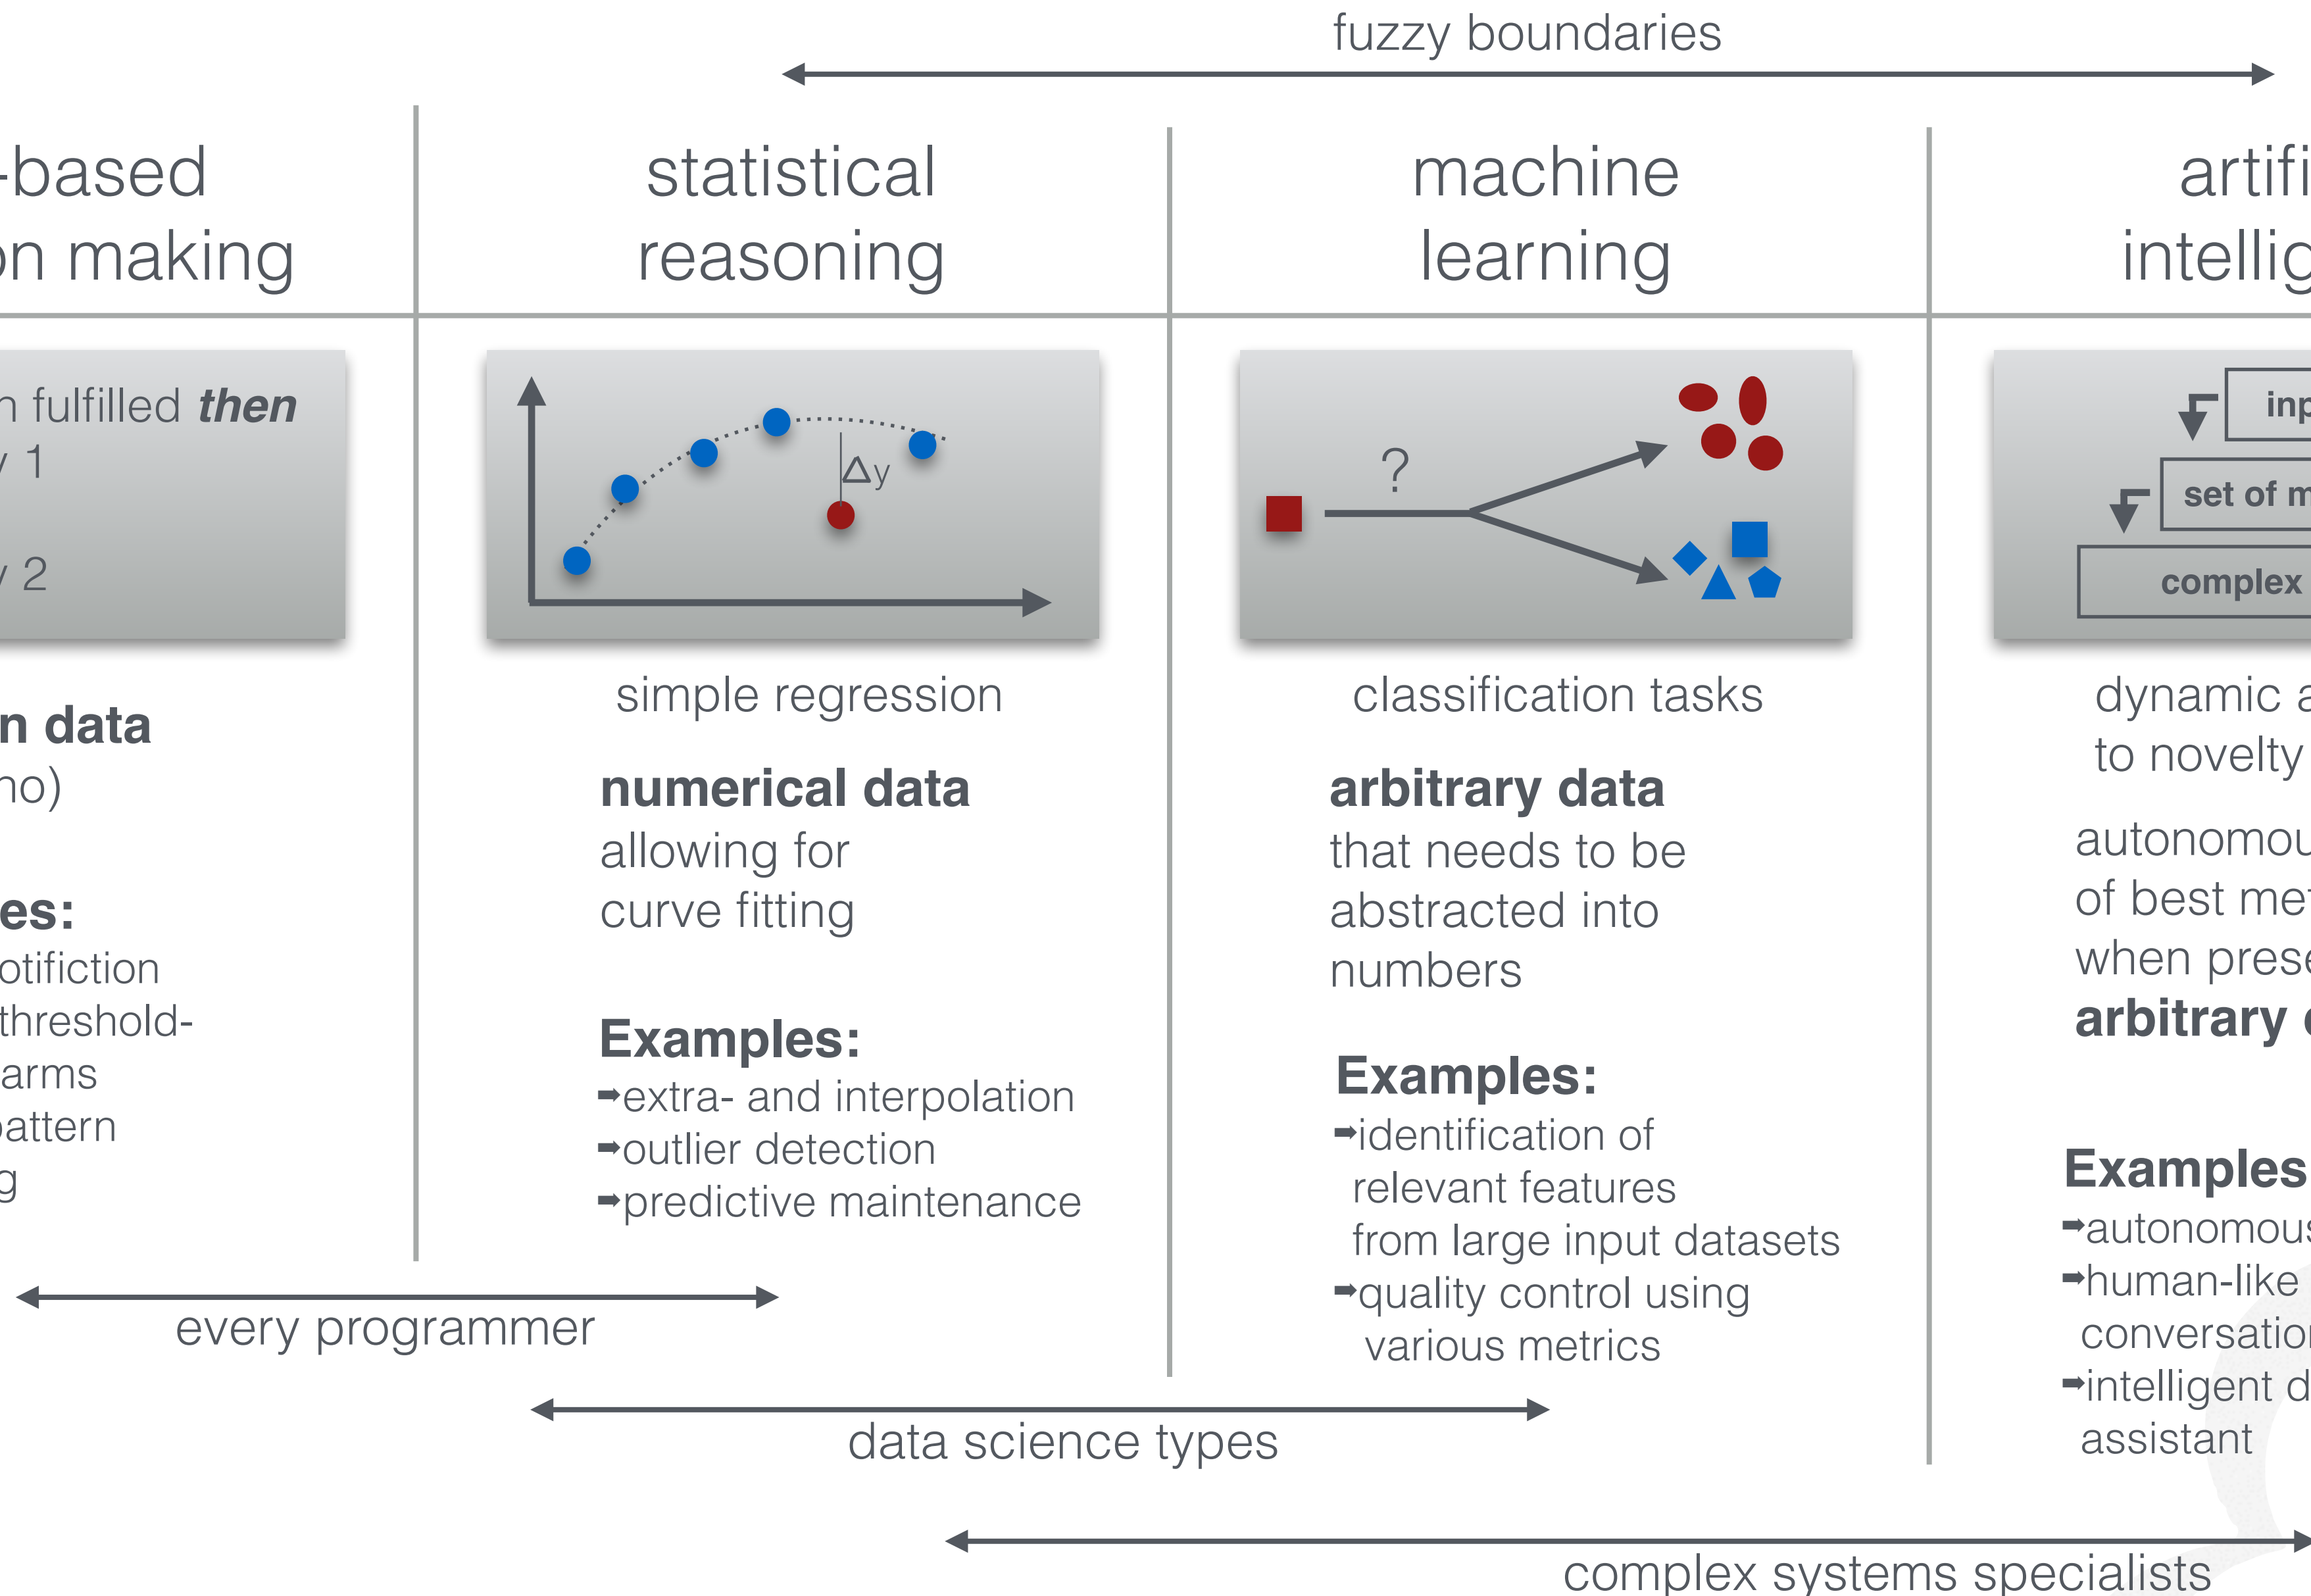

dynamic adaption
to novelty

autonomous selection
of best methodology
when presented with
arbitrary data

Examples:

- autonomous vehicles
- human-like conversational skills
- intelligent digital assistant

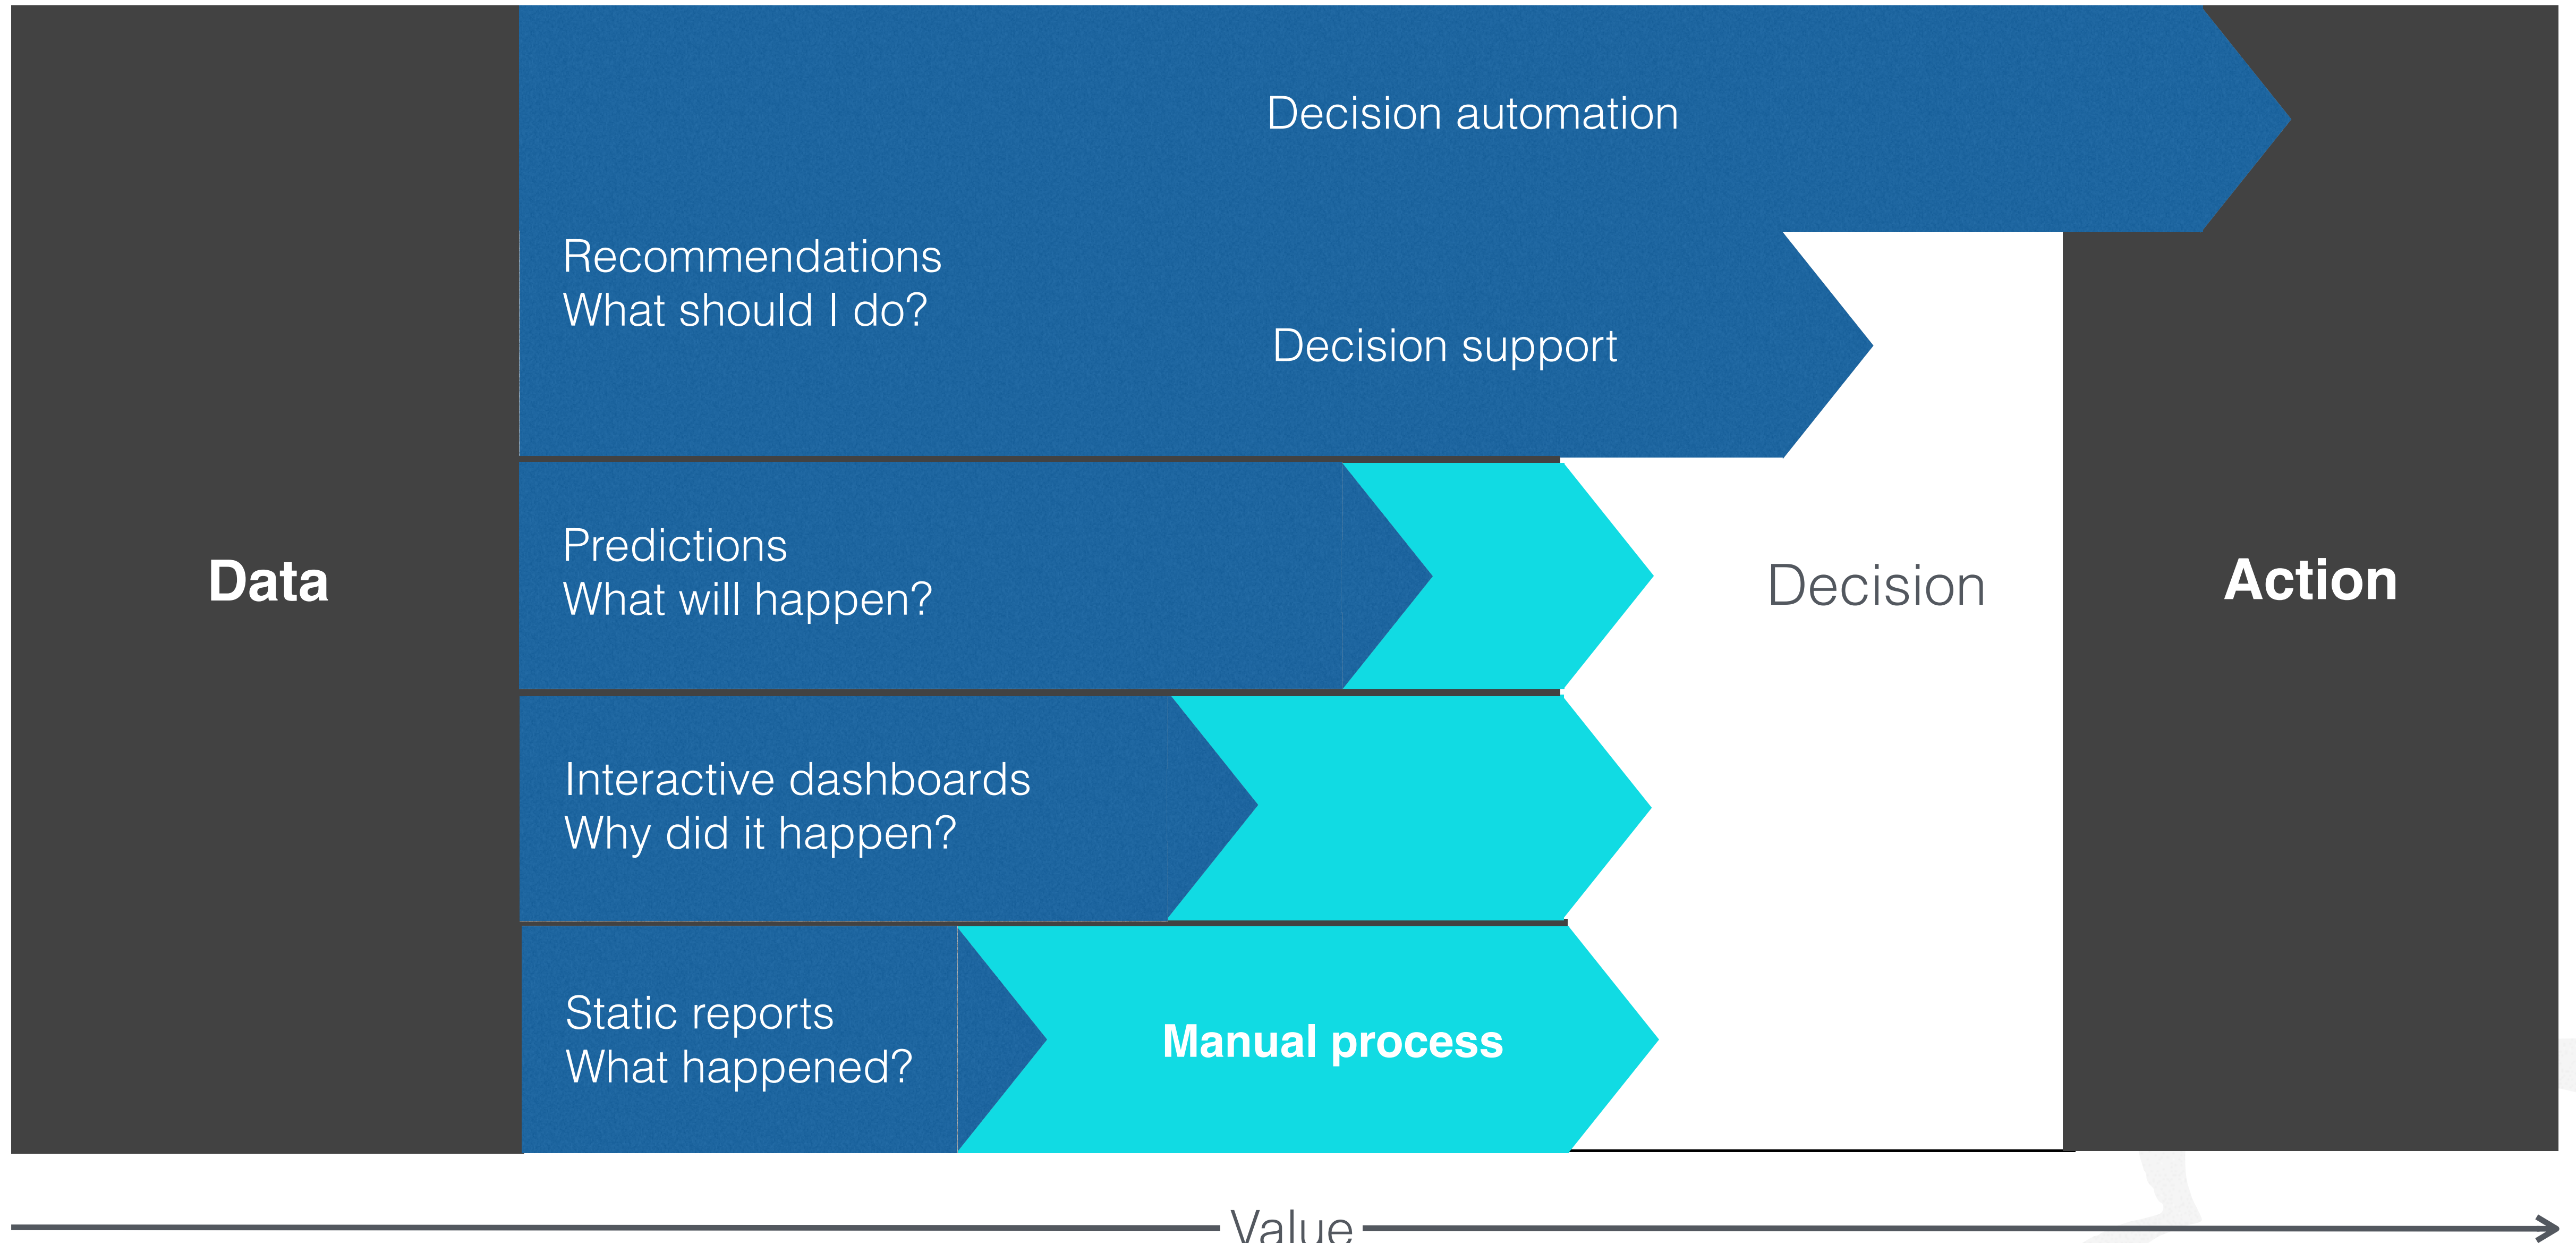

Marketing Teams Will Soon Include “Engagement Scientists”

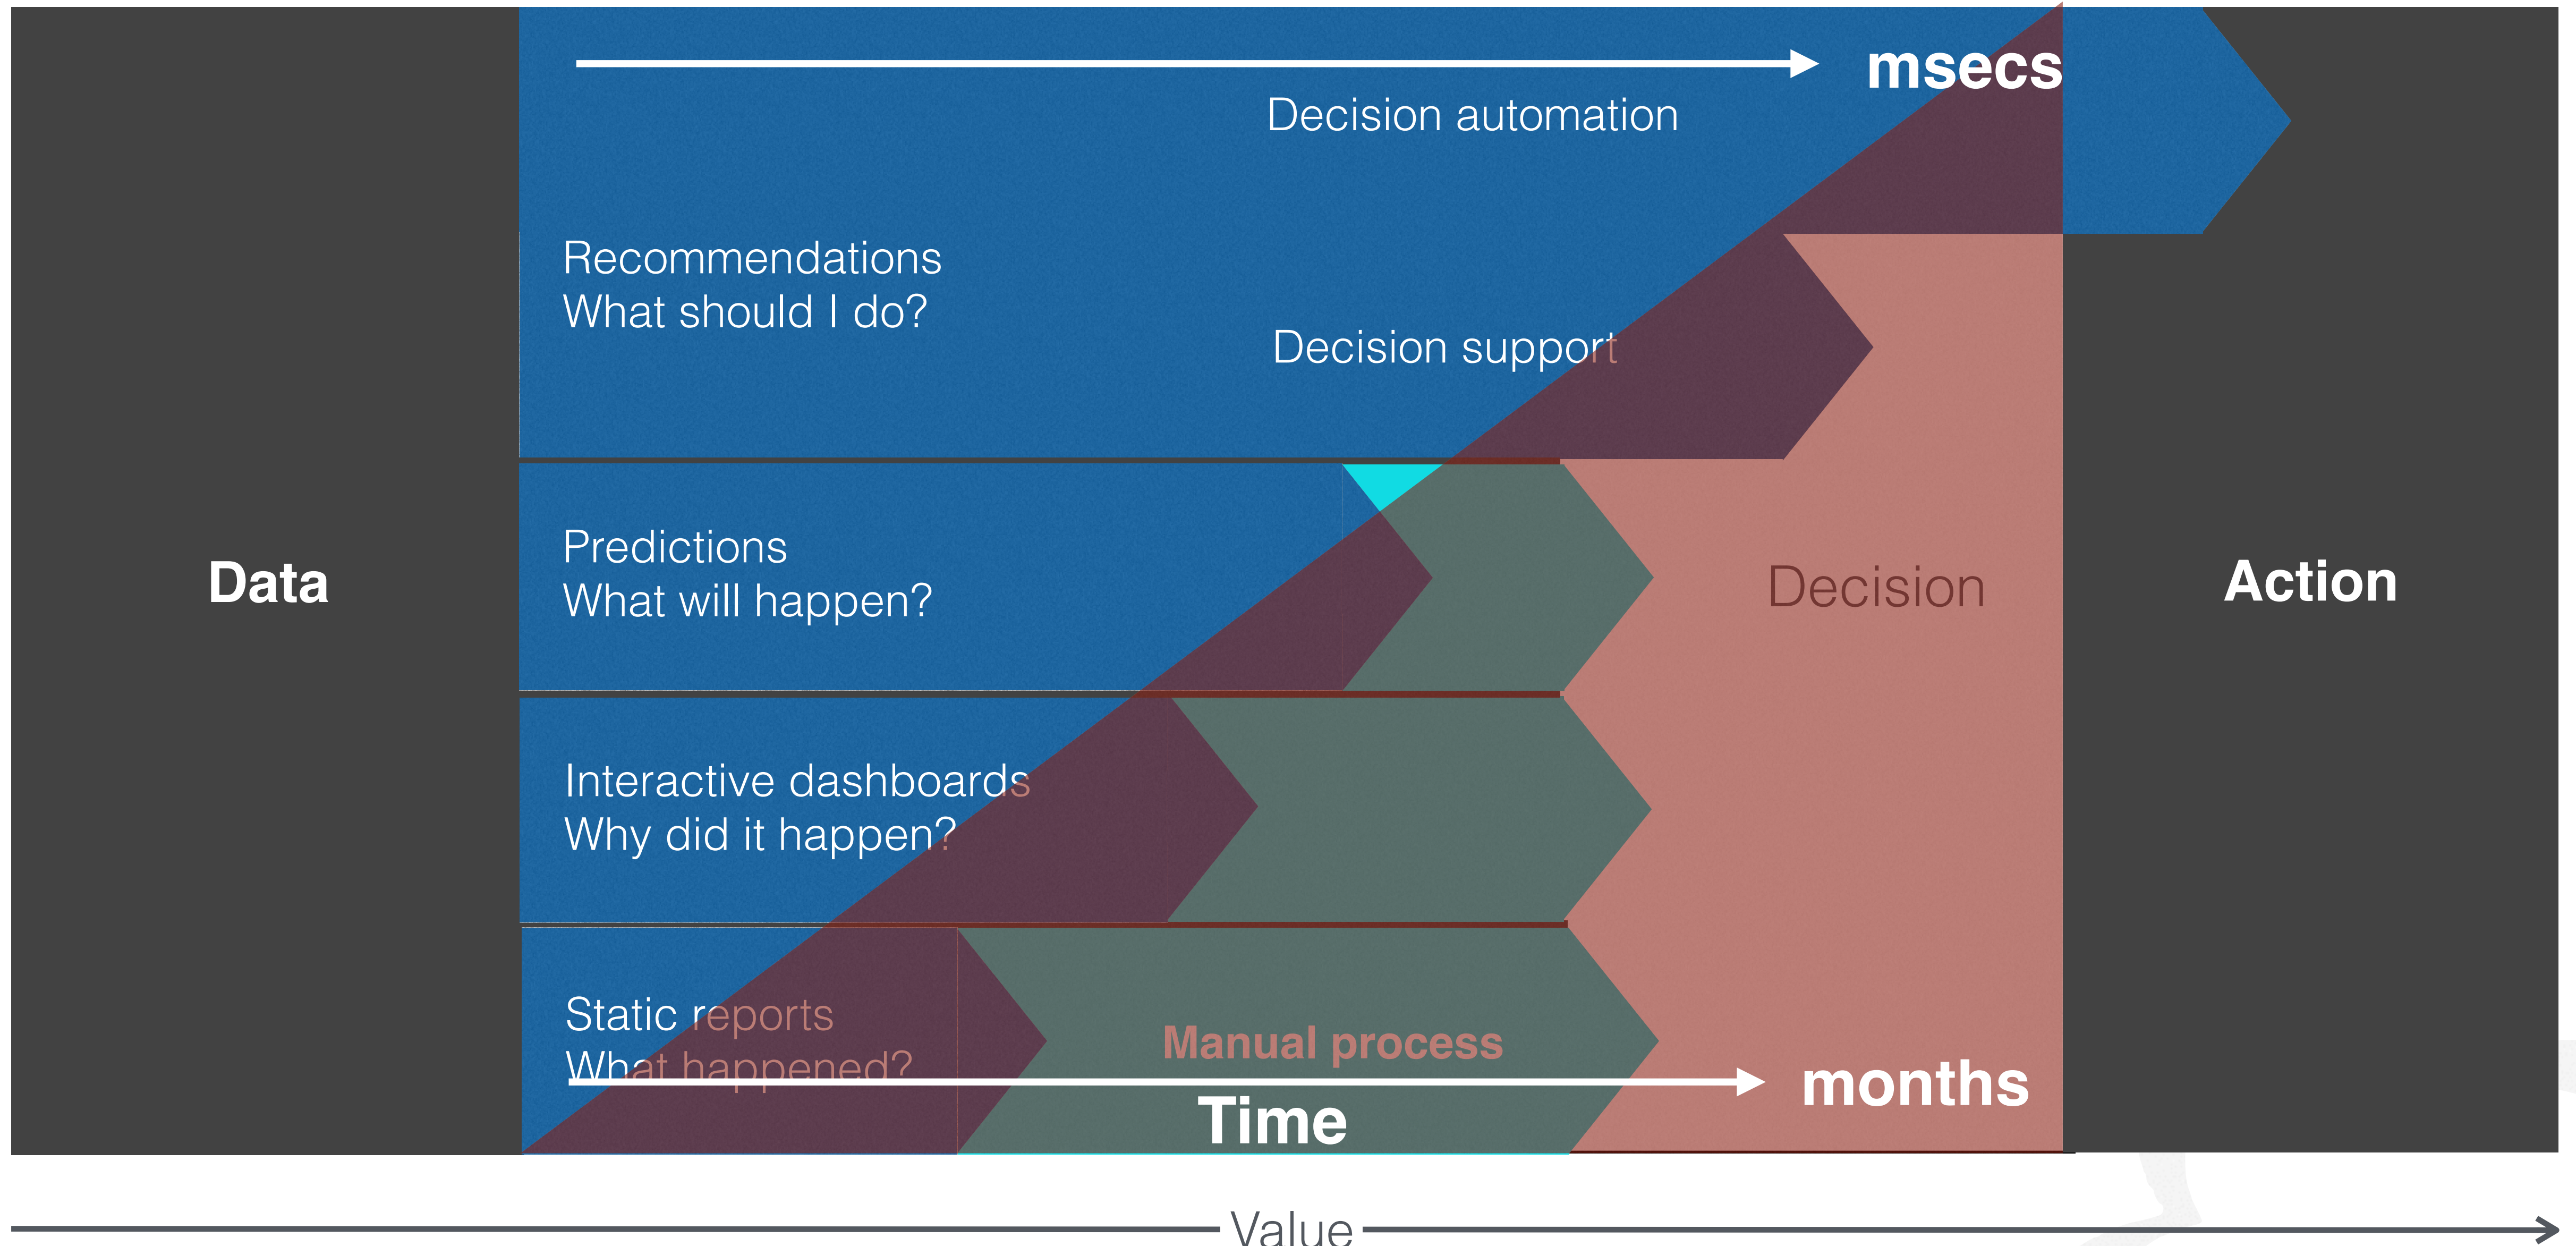

Move over, data scientists, Columnist Paul Ford explains why engagement science is set to redefine the way marketers do business.

Data Science - From Data to Decisions to Actions

Seeing
is Believing

Drive Big Data exploration with an easy to use analytic interface

Anyone can start rapid exploration of big data repositories. With an intuitive use interface, you can create segments based on simple criteria, or business-driven filters. Exploration is as simple as looking for a holiday trip on hotel.com! Ajust slider controls, pick values, enter your criteria, and you see your target group segmented live in a graphical way, including in an incredible venn diagram.

Open the doors to A/B Testing. Use categorised filters to create additional effects, such as global filters, quarantine filters.

Create advanced analysis, detect trends, find patterns, and use your findings as a source of information to refine segmentation down the road. It's as simple as using the result of a previous segment as a filter criteria !

PRISM

All your activities, simple to find and work with

No need for complex classification or structure. It's never been easier to organise all your work.

The user interface has been tailored to support faceted searches. Filtering on authors, tags, dates is always just one click away! Or you can do free text search too!

today	2	customers	24	prospecting	16
this week	7	sales	5	performances	7
this month	24	campaign	8	sales	4
last month	29	christmas	10	customer satisfaction	6
this year	356	gold	19	loyalty	10
last year	2410	sms	9	complains	5
				analysis	19
				fraud	2

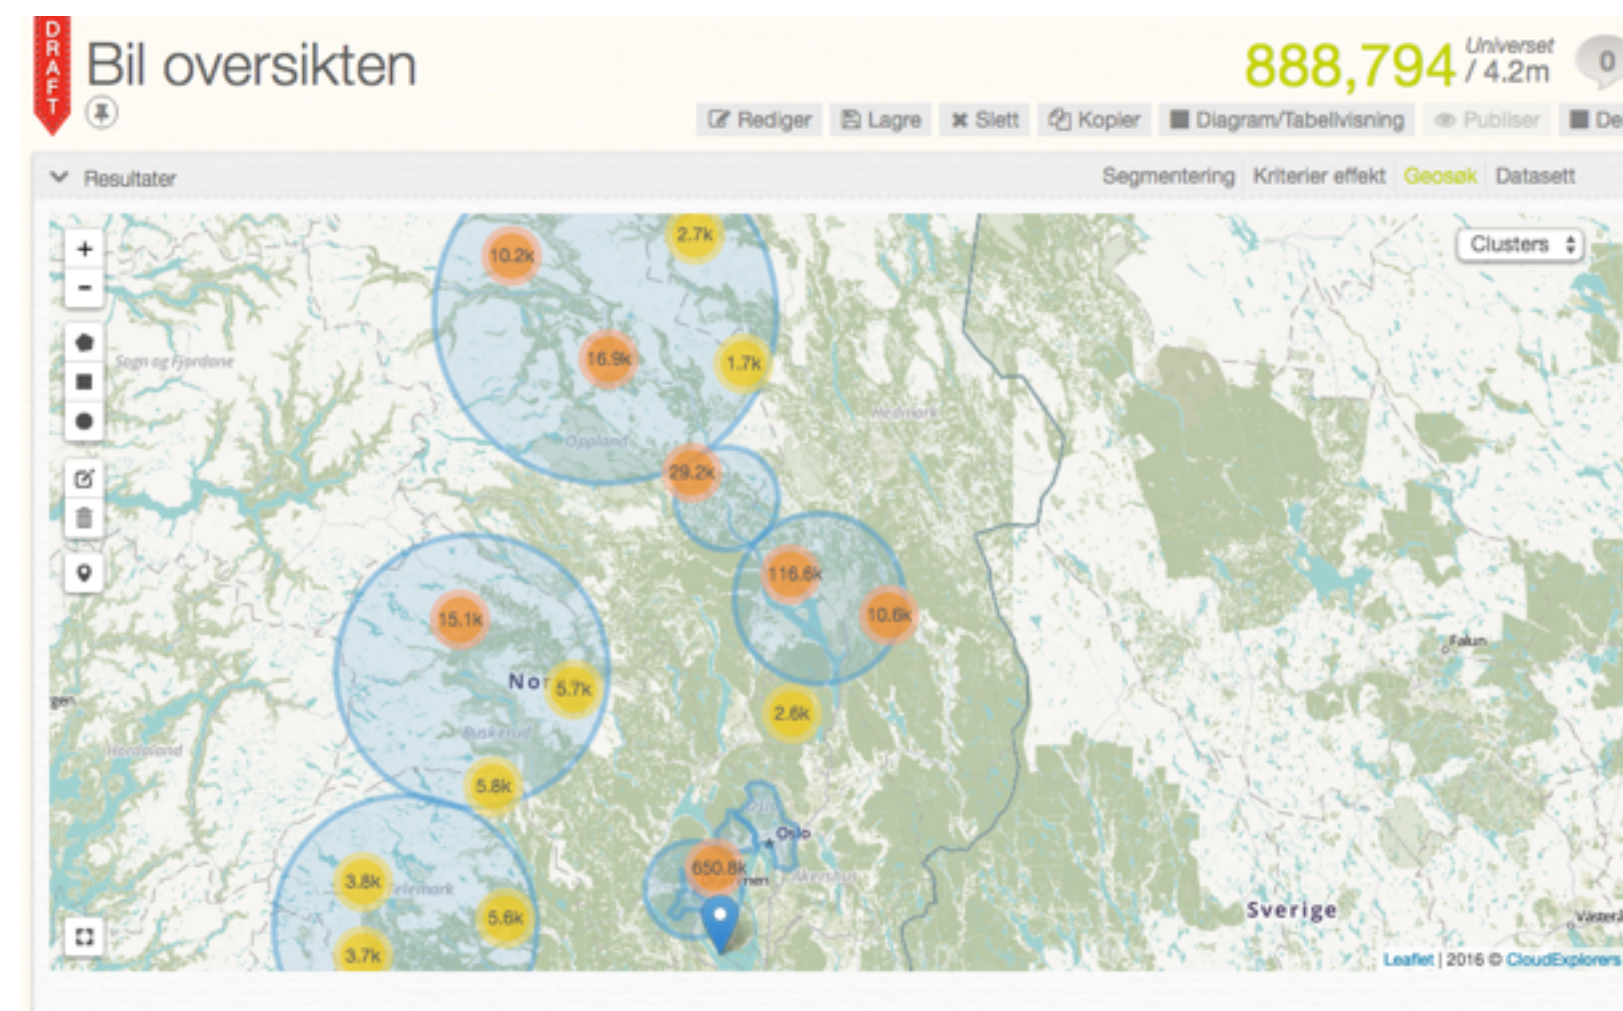

Any data, any volume, any velocity

No need for predefined data structure

There is no need for a large data warehouse projects that spread across months. There is no need to know your data in advance. Prism analytics can crunch any unstructured dataset for any type of industries. Only simple configuration is needed to get started.

And since it's cloud based, you can get started now, no need for software installation.
